EXPERIENCE

Software Engineer

Apr 2025 – Present

Veridical

Austin, TX

Designed and shipped Veridical's customer-facing web platform on AWS (EC2, S3, CloudFront), owning the full stack from architecture through deployment and ongoing reliability.

Built native iOS (Swift, SwiftUI, CoreBluetooth) and Android (Kotlin, Jetpack Compose + Material 3, platform BLE) apps that pair with Veridical hardware over Bluetooth Low Energy.

Developed a responsive Next.js/TypeScript frontend on a reusable component system backed by a Node.js API, standardizing UX and accelerating feature delivery across the platform.

Delivered an end-to-end payment flow with Stripe Checkout and Payment Intents, handling checkout and server-side payment confirmation.

Containerized the stack with Docker and built CI/CD pipelines to AWS, replacing manual releases with automated, repeatable deployments.

Software Engineer

Jan 2024 – Mar 2025

Paycom

Dallas, TX

Built and maintained enterprise HR/payroll features using PHP, React, TypeScript, and MySQL in an Agile team, supporting thousands of daily active users.

Cut page load times up to **2x** on high-traffic, batch-processing screens by optimizing MySQL queries and reducing front-end payload size.

Added structured error handling across critical payroll workflows, improving reliability under heavy batch-processing load.

Built a library of modular, reusable React components, accelerating feature delivery and improving maintainability across teams.

Software Engineer Intern

May 2023 – Aug 2023

Paycom

Dallas, TX

Built an internal event-planning web app with a C#/.NET backend and React/TypeScript frontend, automating recruiter scheduling workflows.

Co-built a C# + TypeScript project that won first place at the company hackathon.

PROJECTS

Raid – Multiplayer FPS & Online Backend | *Rust (Axum), PostgreSQL, Unreal Engine 5*

2026

Solo-built a server-authoritative multiplayer game backed by a Rust/Axum HTTP service handling JWT auth, matchmaking, party/lobby, persistence, and economy across a modular 25-module codebase.

Maintained **97% backend test coverage** (600+ Rust tests) with CI guardrails enforcing data invariants across CSV, database, and in-engine data tables.

Honest & Reliable Motors – Dealership Lead-Gen Site | *Next.js, React, Tailwind, AWS*

honestandreliablemotors.com

Built a production marketing site for a used-car dealership with filterable vehicle inventory, a monthly-payment calculator, financing pre-qualification, and a password-protected admin dashboard with full CRUD persisted to SQLite.

Implemented a validated lead pipeline with email delivery via AWS SES/WorkMail and structured SEO (JSON-LD schema, sitemap); handled SES production-access approval and dependency CVE patching.

EDUCATION

The University of Texas at Austin

Expected 2028

Master of Science in Computer Science

Austin, TX

Texas State University

Dec 2023

Bachelor of Science in Computer Science; Minor in Applied Mathematics

San Marcos, TX

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Design, Software Engineering, Internet Software Development, Computer System Security, Machine Learning, Data Mining.

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, C++, Python, Rust, PHP, Swift, Kotlin, C#, SQL

Frontend: React, Next.js, Vue.js, SwiftUI, Jetpack Compose, Tailwind CSS, HTML/CSS

Backend & Data: Node.js, .NET, PostgreSQL, MySQL

Mobile & Integrations: iOS (CoreBluetooth), Android (BLE), Stripe

DevOps & Tools: AWS (EC2, S3, CloudFront), Docker, CI/CD, Git/GitHub
