EXPERIENCE

Software Engineer

Apr 2025 – Present

Veridical

Austin, TX

Designed and shipped Veridical's customer-facing web platform on AWS (EC2, S3, CloudFront), owning the full stack from architecture and infrastructure through deployment and ongoing production reliability.

Built native iOS (Swift, SwiftUI, CoreBluetooth) and Android (Kotlin, Jetpack Compose with Material 3, platform BLE) apps that pair with Veridical hardware over Bluetooth Low Energy for real-time control.

Developed a responsive Next.js/TypeScript frontend on a reusable component system backed by a Node.js API, standardizing UX and accelerating feature delivery across the entire platform.

Delivered an end-to-end payment flow with Stripe Checkout and Payment Intents, handling client-side checkout, server-side payment confirmation, and webhook-driven order fulfillment.

Containerized the stack with Docker and built CI/CD pipelines to AWS, replacing manual releases with automated, repeatable, and reproducible deployments across environments.

Software Engineer

Jan 2024 – Mar 2025

Paycom

Dallas, TX

Built and maintained enterprise HR and payroll features using PHP, React, TypeScript, and MySQL in an Agile team, supporting thousands of daily active users across production workloads.

Cut page load times up to 2x on high-traffic, batch-processing screens by optimizing MySQL queries, adding targeted indexes, and reducing front-end payload size on critical paths.

Added structured error handling across critical payroll workflows, improving reliability and observability under heavy batch-processing load during peak periods.

Built a library of modular, reusable React components, accelerating feature delivery and improving maintainability and consistency across multiple product teams.

Software Engineer Intern

May 2023 – Aug 2023

Paycom

Dallas, TX

Built an internal event-planning web app with a C#/.NET backend and React/TypeScript frontend, automating recruiter scheduling workflows and reducing manual coordination overhead.

Co-built a C# and TypeScript project that won first place at the company-wide engineering hackathon.

PROJECTS

Raid – Multiplayer FPS & Online Backend | *Rust (Axum), PostgreSQL, Unreal Engine 5*

2025 - Present

Solo-built a server-authoritative multiplayer game backed by a Rust/Axum HTTP service handling JWT auth, matchmaking, party/lobby, persistence, and economy across a modular 25-module codebase.

Maintained 97% backend test coverage with 600+ Rust tests and CI guardrails enforcing data invariants across CSV, database, and in-engine data tables to prevent drift.

Honest & Reliable Motors – Dealership Lead-Gen Site | *Next.js, React, Tailwind, AWS*

honestandreliablenmotors.com

Built a production marketing site for a used-car dealership with filterable vehicle inventory, a monthly-payment calculator, financing pre-qualification, and a password-protected admin dashboard with full CRUD persisted to SQLite.

Implemented a validated lead pipeline with email delivery via AWS SES/WorkMail and structured SEO (JSON-LD schema, sitemap), handling SES production-access approval and dependency CVE patching end to end.

EDUCATION

The University of Texas at Austin

Expected 2028

Master of Science in Computer Science

Austin, TX

Texas State University

Dec 2023

Bachelor of Science in Computer Science; Minor in Applied Mathematics

San Marcos, TX

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Design, Software Engineering, Internet Software Development, Computer System Security, Machine Learning, Data Mining.

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, C++, Python, Rust, PHP, Swift, Kotlin, C#, SQL

Frontend & Mobile: React, Next.js, Vue.js, SwiftUI (CoreBluetooth), Jetpack Compose (BLE), Tailwind CSS

Backend & Tools: Node.js, .NET, PostgreSQL, MySQL, Stripe, AWS (EC2, S3, CloudFront), Docker, CI/CD, Git/GitHub
